github.com/Surajnav2210 | San Francisco, CA, USA (Open to Relocation)

EDUCATION

University of Wisconsin–Madison May 2026
B.S. Computer Science, B.S. Data Science Madison, WI
Relevant Coursework: Data Structures & Algorithms (C++), Artificial Intelligence, Database Management Systems, OOP (Java), Machine Organization (C, x86)

TECHNICAL SKILLS

Languages & Frameworks: Python, TypeScript, Java, C++, SQL, React, Next.js, Node.js, FastAPI, React Native, PyTorch, Pandas
Cloud & Infrastructure: AWS (S3, SQS, Lambda, IAM), PostgreSQL, Docker, Supabase, Firebase, ChromaDB, Linux, Git
Engineering: LLM products, RAG, model evaluation, event driven systems, microservices, REST APIs, CI/CD

EXPERIENCE

Software Engineer, *PBS Wisconsin* Jan 2026 – May 2026
- Built a Slack based **RAG assistant** with **FastAPI (Python)** and ChromaDB, letting staff search **500+ records** in seconds.
- **Worked directly with staff** to gather requirements, then owned the service **end to end, from design through deployment**.
- Owned **embedding model selection** and chunking strategy, running **evaluation checks against real queries** before releases.
- Built the data pipeline from the Airtable **REST API** with **fault tolerant error handling** and **schema validation**.
- Set up **query logging and monitoring**; shipped **Tableau dashboards** and **stakeholder demos** on **weekly Agile sprints**.

Full Stack Software Engineer, *Dealcycle AI* May 2025 – Aug 2025
- Shipped **two production web applications** end to end in **Next.js, React, and TypeScript** on a **microservices architecture**.
- Designed the **PostgreSQL schema** and built **REST APIs** in **Python and Node.js** behind the React frontend.
- Owned **CI/CD deployment on AWS with Docker and Git** through launch and operational support.
- Instrumented **PostHog (15+ events)**, found onboarding drop off, and shipped a redesign that **improved retention**.
- Built a **RAG Q&A tool** in Python letting users query **20+ client documents** via chunked LLM embeddings and a **REST API**.

Undergraduate Research Assistant, *MAGIC Lab, UW–Madison* Jan 2025 – Nov 2025
- Built a **Python/Pandas data pipeline** ingesting, cleaning, and analyzing **1K+ data points across 10 studies**.
- Wrote PyTorch scripts **automating 20+ sessions**, cutting setup from **45 minutes to a single command**.

Software Engineer Intern, *Evenforce Technologies Pvt. Ltd.* Jun 2023 – Jul 2023
- Shipped features for **Getafix**, a **garage management SaaS serving 200+ dealerships**, on a **10 person product team**.
- Improved reliability of Getafix's **notification system** by building **real time REST APIs** and debugging its backend SQL.
- Cut dashboard latency **4x (8s to under 2s)** by **profiling and optimizing slow SQL queries**, shipped via weekly code reviews.

PROJECTS

StructNote, AI Voice to Structured Document SaaS (solo, deployed) | *Next.js, TypeScript, AWS, Supabase* Jul 2026
- Built and deployed an **LLM product solo in one week** (**surajnaveen.dev**): **voice in, schema validated document out, <40s**.
- Designed an **event driven pipeline**: presigned **S3** uploads, **SQS jobs with DLQ**, and **idempotent Lambda workers**.
- Orchestrated **Whisper transcription** and Gemini structuring into **schema validated JSON** with automatic retry.
- Built a **status state machine** (queued, transcribing, structuring, done) streaming progress to a **live polling UI**.

ML Fall Detection, Wearable Technologies Inc. (consulting) | *Python, precision recall, VoC* Jan 2026 – May 2026
- Owned a semester long **customer engagement** for Wear Tech, working directly with the **CEO and ML lead** throughout.
- Audited the **production fall classifier**: the alert cutoff was an implicit **0.50 argmax default**, never chosen for care settings.
- Built a **19 threshold precision recall sweep** with **3 selection policies** (max F1, recall weighted F2), selecting on validation only.
- Recommended **0.40**, catching **2 more real falls per +2 false alarms**; **adopted by the ML lead** with full handoff.
- Designed and ran a **Voice of Customer survey** with caregivers at a live care facility on accuracy and wearability.
- Quantified the **usability vs performance gap** (comfort scores vs false alarm burden); findings fed product priorities.

Sponta, Social Coordination App | *React Native, TypeScript, Firebase, Node.js* Sep 2025
- Built and launched a **React Native + TypeScript** app with a **Node.js** backend and **Firebase** real time sync for **40+ users**.

DCGAN Patcher, Image Reconstruction (Hackathon) | *Python, TensorFlow/Keras, OpenCV, NumPy* Mar 2025
- Built and trained **DCGANs** in **TensorFlow/Keras** to reconstruct images; debugged **vanishing generator gradients**.
